

WATER PARK TUBES

Variety of Colors

All tubes are available in just about any color. We stock standard colors and we can custom produce all tubes in any color you choose. Minimum order quantities may apply on custom orders.

Custom Logos & Printing

We can add custom logos and printing to any waterpark tube. We can print your park logo, sponsor logo or a special print design.

Waterpark tubes have double inner gussets which distribute seam stress more efficiently than other tubes without this feature. Some tubes on the market have only a single inside seam. These are very easy to manufacture and are much cheaper to produce. However, single inside seams have a tendency to fail quickly and are very uncomfortable to the rider. The rider's back side rubs against this protruding seam. We use only Double Inner Gussets on all tubes.

Double Outside Seams

All waterpark tubes have double outside seams with a smooth beaded finish. The outside seams are heat sealed and a bead is formed along the entire length of the seam to create a smooth finish. This extra bead helps prevent abrasion wear and prolongs the life of the tube.

Heavy-Duty Handles

We use only extra heavy-duty handles on all waterpark tubes.

Available in 36", 42", 48" and 54" sizes.
